---

Q1 )How would you represent testing of the application with multiple browsers?

ans) They will be represented using fork which implies concurrent processes.

Q2)Can patching the production code and updating the Subversion repository be done in concurrent?

ans) No, generation of the patch file will be done only after the subversion repository works fine on all the mentioned browsers.

Q3) Can patching the production code and updating the Subversion repository be done in parallel?

ans) Yes, generation of the patch file is already done. We can upload that to production code and update the local repository to SVN. These two tasks can be done in parallel without any race conditions.
